

I tried to remove "Global Maestro Data Services" from product list and got the error in screen shot.

The screenshot shows the Apigee Developer Portal interface. At the top, there is a navigation bar with the Apigee logo and various menu items like Dashboard, APis, Publish, Analytics, Admin, and Help. The user is logged in as 'Surabhi.gupta@am.jll.c.'. The main content area displays the details for the 'Maestro - QA' application. A red error message is visible at the top right of the application details, stating 'Error deleting Product' and 'DeveloperId apps does not exist in organization jll-nonprod'. Below the error message, there are 'Edit' and 'Delete' buttons. The 'Company App Details' section lists the following information: Name: maestro-qa, Display Name: Maestro - QA, Registered: Aug 17 2017 10:26 AM, Company: jll-maestro, App Status: Approved, Callback URL: NA, and Notes. The 'Credentials' section shows a table with columns for Issued, Expiry, Consumer Key, Consumer Secret, and Status. The first row shows an issued date of Aug 17 2017 10:26 AM, an expiry of Never, and a status of Approved. Below this, there is a 'Product' section with a list of products: Global Enterprise Data Services, Global Maestro Data Services, Global Sample API, and Maestro Services, all with a status of Approved. The 'Custom Attributes' section shows a table with columns for Name and Value, listing attributes like creationDate, lastModified, and lastModifier.

Dashboard / Developer Apps / Maestro - QA

**Maestro - QA** Error deleting Product  
DeveloperId apps does not exist in organization jll-nonprod
